

CASE STUDY – CRO DOCUMENT MANAGEMENT

A DOCUMENT MANAGEMENT SOLUTION FOR YOUR CONTRACT RESEARCH ORGANIZATION (CRO)

THE CHALLENGE: DISORGANIZED DOCUMENTS AND POORLY UNDERSTOOD PROCESSES SURROUNDING THE DOCUMENTATION ASSOCIATED WITH CLINICAL TRIALS...

Contract research organizations (CROs) have an important need for a document management system that can integrate data coming from many different sources (instruments, organizations) and in different formats. A centralized, secure method for storing and accessing documentation is critical. Paper-based storage processes are error-prone, and the processes associated with clinical trials can be poorly communicated, leading to bad data.

THE SOLUTION: A WEB-BASED DOCUMENT MANAGEMENT SYSTEM THAT LETS YOU DIGITIZE AND ELECTRONICALLY STORE ALL YOUR DOCUMENTS AND PROCESSES IN A CENTRALIZED, SECURE, AND EASY-TO-ACCESS DATABASE

Aspect Consulting developed an easy-to-use, web-based document management system with a customized workflow feature to help users manage their document approval process. Document processes and procedures can be stored along with each document as it moves through each stage. Users have the ability to categorize, search, and retrieve all documents and provide access throughout the organization.

A tabbed interface lets you preview the document, attach notes, and graphically view the approval workflow or history of the document. Icons represent the familiar concepts of cabinets, drawers, and folders. Levels of users can be defined so that the right people can see the right documents at the right time.

THE BENEFIT: IMPROVED DOCUMENT ORGANIZATION WITH SECURE ACCESS

Aspect's Prodativ[®] Document Management can improve adherence to your processes, generating more confidence in your clients, auditors and/or regulators. The gain in process efficiency, accuracy, and adherence to protocol is dramatic. The easy to use interface encourages application use, resulting in a quick installation to productive use timeframe.
