

THE CHALLENGE:

- LIMITED REPORTING CAPABILITIES FROM CARSIS

As a major pharmaceutical company, this client needed critical Financial Reporting capability from the data residing in the CarsIS Application. Given the reporting limitations of CarsIS, their need for standardized reporting for monthly, quarterly and annual analysis was sorely lacking. And since sales, chargebacks and rebates have a significant impact on net profit; it was difficult to accurately determine overall company performance.

THE SOLUTION:

- OPERATIONAL DATA STORE

Aspect designed, developed, and implemented an operational data store, refreshed nightly, with the data from CarsIS. This data was also summarized to quickly and efficiently enable ad-hoc reporting. A web portal and browser-based application was then implemented which delivered this data as information displayed in clear, comprehensive standardized reports.

THE BENEFIT:

- REAL-TIME VIEW OF COMPANY PERFORMANCE

This client's new browser-based reporting tool enables real time access to summarized data from CarsIS via home or office. This data is delivered in presentation quality reports to senior executives and key employees throughout the company without the need for user training of a complex ad-hoc or OLAP tool. Since the data is refreshed nightly, it provides an immediate, accurate snapshot of company performance anytime, anywhere.
