

We Can Provide All Your DBA Needs

Founded in 1994, **Aspect Consulting, Inc. (ACI)** specializes in database management services, with an established base of clients across industries (references available upon request).

Database Management Service Offerings

- Remote Database Monitoring
- Database Administration
- Backup and Recovery
- RDBMS Software Installation, Configuration, and Upgrades
- Performance Tuning
- Database Server Consolidation
- Security Best Practices
- Documentation of Configuration

Team Approach

Remote DBA monitoring and maintenance services include **three tiers of support**:

One primary and **two secondary** DBAs will become familiar with your environment.

The secondary DBAs will have the ability to respond to any critical situation as well as the primary DBA, for comprehensive coverage.

Backup and Recovery Validation

Giving You Peace of Mind that Your Organization's Data Backup and Recovery Methodologies are Sound

Are you certain that your data backup and recovery methodologies are sound? How long will it take to recover your data? Do you know specifically what you can recover? Is it every transaction? Every application? Will data be recovered to the previous month? Week? Or up to the time of disaster?

Aspect Consulting's Database Backup and Recovery Validation provides a truly proactive solution that extends far beyond data backup and recovery.

We take the following steps to protect your data:

Step 1: Assess Backup and Recovery Configuration

We assess your current ability to back up and recover your data and applications system wide.

Step 2: Identify Gaps

We identify any gaps that exist, and we develop steps to mitigate the business risks associated with those gaps.

Step 3: Develop and Implement a Backup & Recovery Plan

We work with you to confirm a back up and recovery configuration that meets all your current SLAs.

Then, upon approval, we implement the plan, closely following your change control and validation requirements.

Upon implementation, Aspect will conduct a mock recovery side by side with your staff, and ensure all procedures are working to plan.

Step 4: Document Configuration

We document the configuration, providing current and future employees with the knowledge to support the configuration going forward.

Ultimately, **Aspect's Database Backup and Recovery Validation** can save you considerable time, money, and frustration and **protect one of your company's greatest resources: information.**
