We Can Provide All Your DBA Needs

Founded in 1994, **Aspect Consulting, Inc. (ACI)** specializes in database management services, with an established base of clients across industries (references available upon request).

Database Management Service Offerings

- Remote Database Monitoring
- Database Administration
- Backup and Recovery
- RDBMS Software Installation, Configuration, and Upgrades
- Performance Tuning
- Database Server Consolidation
- Security Best Practices
- Documentation of Configuration

Team Approach

Remote DBA monitoring and maintenance services include **three tiers of support**:

Senior Level DBA	
Secondary DBA	Secondary DBA
Comprehensive Coverage	

One primary and **two secondary** DBAs will become familiar with your environment.

The secondary DBAs will have the ability to respond to any critical situation as well as the primary DBA, for comprehensive coverage.

Database Infrastructure Assessment
Valuable Service that Puts You in the Driver's Seat

The database infrastructure assessment provides a snapshot of your company's database environment.

The DIA can answer important questions like "When am I going to run out of disk space?" and "How can I identify and protect against malicious attempts against our database?" It can be as comprehensive or specific as you need it to be, and give you the peace of mind that your data is protected.

We target the following:

✔ **Identify Reliability and Stability Issues**

✔ **Assess Overall Performance Levels**

✔ **Forecast Data Growth**

✔ **Evaluate Security or Confidentiality Risks**

Upon analyzing any or all areas of your current database configuration, Aspect then provides a **detailed report** that identifies and classifies any issues or concerns. We determine if :

- Databases are up
- Disk or file space usage about to be exceeded
- Performance degradations occur
- Missed backups occur
- Security best practices are violated

This thorough assessment pinpoints where systems are vulnerable, or what capacity exists to support the growth of your business now and in the future.

Most importantly, seeing the 'big picture' of your company's database infrastructure will give you confidence in knowing that your system are healthy and able to grow along with your business.

And, we can be engaged to **act quickly and efficiently to ensure your data is protected**. Our experts have years of detailed, hands-on operational knowledge to manage your day-to-day database support needs.
