

Reduce Costs and Increase Operational Efficiency

Let Us Help You Consolidate and Optimize Your Database Server Environment

As a cost center, IT Departments are frequently charged with reducing bottom line costs and improving efficiency, while continuing to meet business objectives and competitive SLAs. **Server consolidation can be the answer** to help improve efficiency and reduce infrastructure operating costs, allowing you to **realize costs savings of 35% to 55%**.

However, without proper planning, you can make investments in inefficient or incompatible technology, make mistakes that can lead to performance degradation or catastrophic system failures, and end up spending costly hours on repairs.

Aspect consultants are experts in implementing effective consolidation plans that allow you to realize both immediate and long-term software license and hardware cost reductions, and increase system utilization and supportability. We follow a proven strategy for solid return on investment:

Why Consolidate?

- **Reduce Licensing & Hardware Costs:** Database servers make the best candidates for consolidation, resulting in significant reductions in RDBMS/OS licensing & hardware costs.
- **Reduce Management Costs:** Consolidation means fewer devices, and fewer resources needed for management and support.
- **Increase System Utilization:** Server workload seldom utilizes its full potential. Smart consolidation results in more efficient utilization, and power savings.
- **Utilize Virtualization:** Virtualization technologies continue to evolve & costs are falling. The cost of operating multiple physical servers greatly outweighs the cost of virtualization software, providing the most cost-effective method for consolidation.

Aspect Expertise

Depth of Experience

Over 20 years specializing in providing data management services, such as server consolidation, database administration, and data integration.

Expert Professionals

Our certified team implements a proven process utilizing the latest technologies. A complex configuration requires experts with a proven track record like ours.

Our Record Speaks for Itself:

We recently helped a 4.1 billion dollar pharmaceutical firm and a 1.4 billion dollar electrical supply company reduce costs associated with hardware and software licensing by 35%, allowing them to refocus those savings on other mission critical projects.
